

The purpose of the browser cache is to speed up web browsing and add functionality. There are 5 areas of the Browser cache:

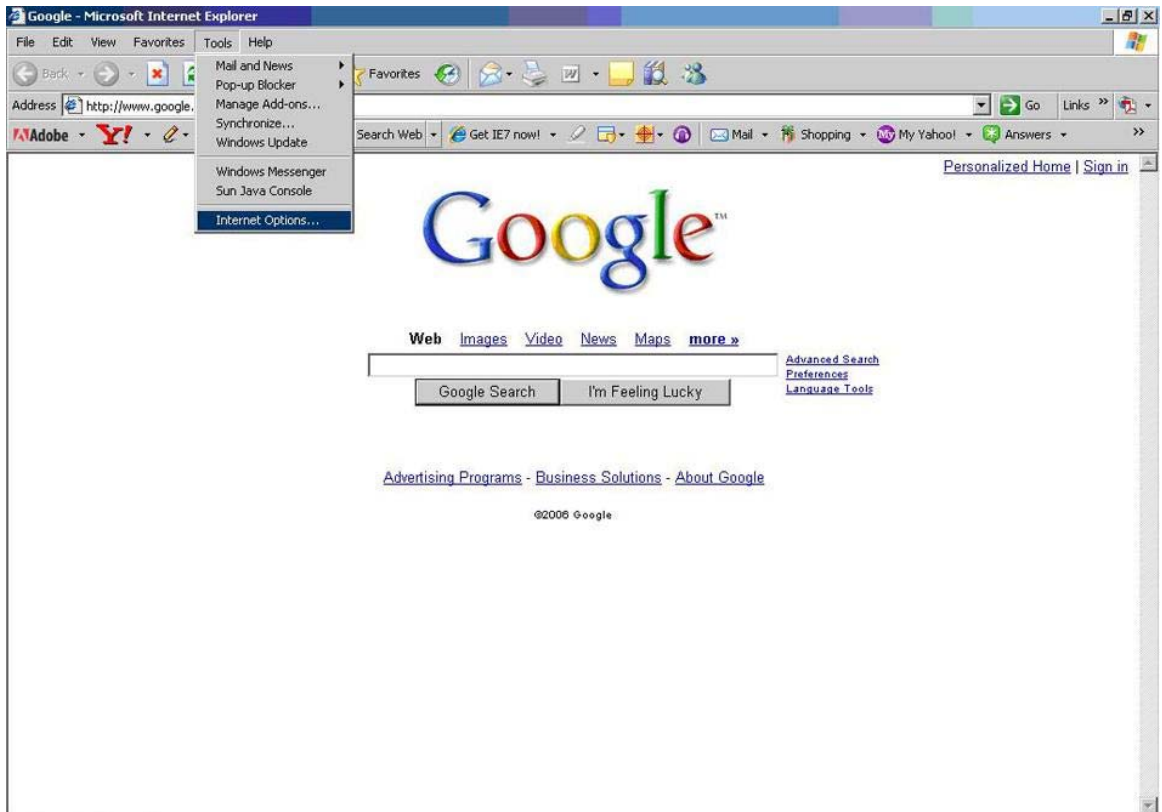

- Temporary Internet Files
- Cookies
- Browsing History
- Form Data
- Passwords

Here are a few reasons why you should clear your browser cache:

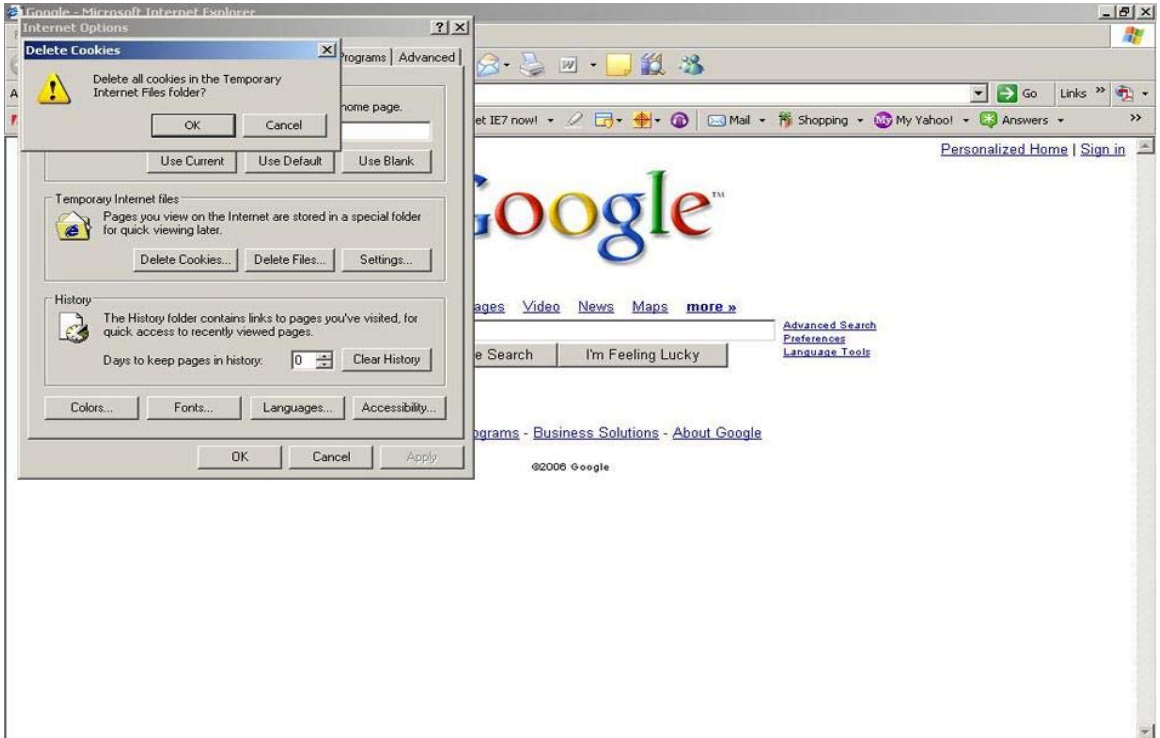

1. To save space – files from visited web sites are stored on your hard drive and significant web browsing can cause a build up if left unchecked.
2. If using roaming profiles, it keeps profile transfer times down – Saved files are not copied from profile to profile.
3. To remove virus or Spyware plagued files which are sometimes delivered via stored code in a visited web site.

So here's how you do it:

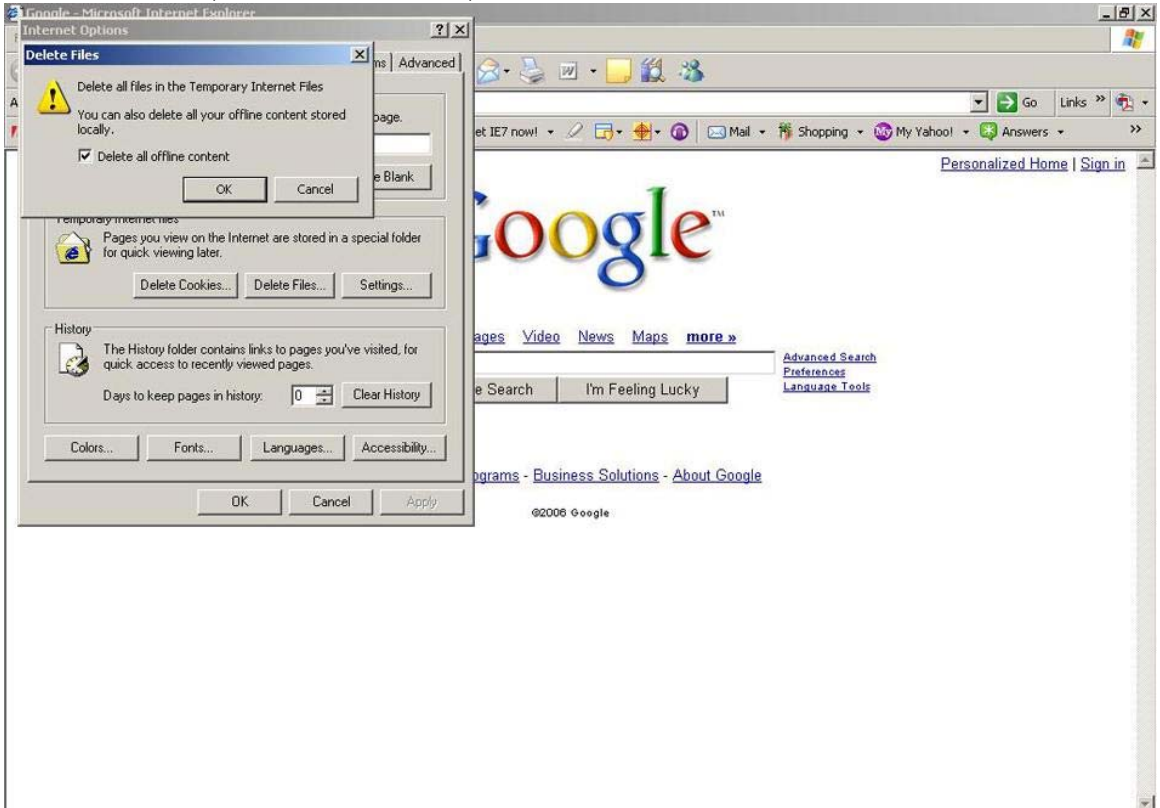

First, open Internet Explorer and then select the Tools menu, then Internet Options:

In that window click the Delete Cookies and then click OK:

Click Delete Files, select the check box, and click OK:

If you have any problems with this feel free to contact Convergence Networks at support@cnwi.net or you can call us at 503.906.1515
